November 2019

Dear friends and colleagues,

Welcome to the HealthPartners 2019 Clinical Indicators Report. This report continues our commitment to the Triple Aim of improving health, experience and cost and the transparent reporting of meaningful measures that reflect the quality of care delivered to our members and patients by our community of providers.

During the years this report has been distributed, we have seen consecutive year-over-year improvement in quality measures due to the impressive work by provider groups focused on quality and effectiveness of care. However, there is still much work to be done. In particular, in the last several years we have seen a national trend towards steady or declining rates on major preventive care screenings including chlamydia, as well as breast, cervical, and colorectal cancer. This trend serves as a call to action to find innovative ways to improve the health of our population and reverse this course. Your partnership and commitment to achieving the Triple Aim in the everyday care of your patients has a significant impact on our members, their families and our communities.

The goal of these measures is to align with and support efforts that are important to our community and the overall health of the population. In collaboration with Minnesota Community Measurement, our measures overlap with the Healthcare Effectiveness Data and Information Set (HEDIS). This combines local and national sources to create a broad list of quality measures that reflect better care for our members and patients and improved outcomes for the populations we serve.

This report would not be possible without the trust, engagement and partnership of all the provider groups that care for our members. Going forward we will continue to improve and innovate by partnering with these groups to strive for the best health and experience of care at the most affordable cost, which is the value our members deserve and expect.

On behalf of HealthPartners and our members, thank you for your ongoing dedication and proven ability to improve the health of our community.

Sincerely,

A handwritten signature in black ink, appearing to read "Andrew Zinkel". The signature is fluid and cursive.

HEDIS Identification of measures, or elements of measures that are consistent with HEDIS measurement specifications

INTRODUCTION

Purpose

This annual Clinical Indicators Report features comparative provider performance on measures of clinical quality, patient experience and affordability. The Triple Aim approach improves the health of the population, enhances the patient experience of care and helps make care more affordable. Measurement results displayed relate to preventive and chronic care, behavioral health, pharmacy, specialty care, hospital care and total cost of care. The primary purpose is to provide valid and reliable information for providers to use in their efforts to improve patient care and outcomes.

Content

This year's Clinical Indicators Report includes comparative provider performance on 83 measures. Rates are reported by primary care provider group, specialty care provider group, pharmacy chain or hospital.

The HealthPartners Partners in Excellence (PIE) program recognizes providers with consistent high performance in the Health & Patient Experience Quality Dimension quality clusters. This year 24 primary care provider groups, 36 specialty care provider groups and 15 pharmacy chains met the PIE targets.

The report includes:

- Measurement definitions and methodologies based on the following categories: chart review, administrative data, hybrid (combination administrative and chart review), provider self-reported data, provider survey and member survey
- Graphs of provider rates with 95th percentile confidence intervals, where applicable
- HealthPartners rate: weighted population average for measures that are sampled
- Average group/hospital/pharmacy chain: an average provider group rate (the average of the reported provider groups) is displayed on the graph. The average provider group rate is highlighted to allow for easy comparison
- Measures and components that contribute to the HealthPartners Partners in Excellence (PIE) program
- Identification of measures, or elements of measures, that are consistent with HEDIS measurement specifications 
- Index of provider groups, clinics, hospitals and pharmacy chains contributing data to this report

Risk Adjustment

Risk adjustment is considered when developing quality measures. The measurement methodology will describe when case-mix or severity adjustment is applied. Clinical measures are consistent with evidenced-based clinical guidelines. Case-mix and severity is only applied when the guideline specifically defines different treatment protocols or expected outcomes based on variations in the health of the population. For the purpose of comparing provider performance, using the same measurement criteria for all patients produces valid comparative provider results when there is no evidence to suggest there is significant variation in patient populations across our provider groups.

Key Impacts

The following clinical indicators statistically improved from the previous year:

- Optimal Health Management for Severe Mental Illness - Behavioral Health Groups
- Optimal Health Management for Severe Mental Illness - Non-Behavioral Health Groups
- Diabetic Eye Exam
- Body Mass Index (BMI) Assessment - Adult
- Body Mass Index (BMI) Assessment - Child and Adolescent
- Generic Drug Use - Primary Care
- Generic Drug Use - Behavioral Health Providers
- Generic Drug Use - OB/GYN Providers
- Preventive Services - Adult - Primary Care
- Child & Teen Check-Ups (C&TC)
- Lead Screening

New Measures

- No new measures were added to the report this year.

Retired Measures

- No measures were retired from the report this year.

Measurement Changes

- No measurement changes in the report this year.

Participating Providers

Rates are displayed for HealthPartners provider groups based on patient volume, Partners in Excellence program participation, geographic location and strategic relationship with HealthPartners. Primary care provider groups included in this year's Clinical Indicators Report serve over 90 percent of HealthPartners membership.

Data Display

Each graph displays provider group performance (gray bars) and average group performance (green bar). Comparative provider data are only made available for a sample size or population denominator of at least 30. While health plan rates provided on the measure description pages are weighted as described within the measure, the average medical group bar on the graphs represents the unweighted average performance of the displayed provider groups only.

The upper and lower confidence intervals represent the 95th percentile confidence intervals. In addition, for all hybrid measures (those that include chart review) a finite population correction factor is used to best account for the percentage of the total of a provider group's population that the sample represents. For example, when calculating the Optimal Health Management for Severe Mental Illness measure, a group whose sample collected approaches the entire HealthPartners measure eligible population at that group will have a very narrow confidence interval. If the entire HealthPartners measure eligible population of that group is used, there will be no confidence interval. This reflects more confidence that the rate derived from the sample actually constitutes the true rate for their full population. Graphs using a finite population correction factor will include a footnote indicating this application.

The 2019 Clinical Indicators Report Technical Supplement is available online and includes measurement detail, optimal component rates and trended plan rates over time. The 2019 Clinical Indicators Report and Technical Supplement are both available at healthpartners.com/quality.

ATTENTION DEFICIT HYPERACTIVITY DISORDER (ADHD)

Follow-Up Visit after New Medication

January 1, 2018 – December 31, 2018

Description

The percentage of children ages six to 17 with an ambulatory prescription dispensed for ADHD medication between January 1, 2018 and December 1, 2018, that had a minimum of one follow-up visit with a practitioner with prescribing authority within 30 days of starting the medication.

Methodology — Administrative

Elements of this measure are consistent with the HEDIS 2019 Follow-Up Care for Children Prescribed ADHD Medication measure and includes all members ages six to 17 years old as of prescription fill date, from Commercial and Medicaid products with a pharmacy benefit who were continuously enrolled for 120 days prior to starting ADHD medication through 30 days after. Population identification is based on claim and membership databases. Rates are calculated using administrative data only. Members are attributed to the provider group of the practitioner who prescribed the ADHD medication.

Results

Total eligible members	2,561
Members with follow-up visit(s)	1120
ADHD Follow-Up Visit Rate	43.7%

ADHD Follow-up Visit after New Medication
1/1/2018-12/31/2019

ANTIDEPRESSANT MEDICATION MANAGEMENT

May 1, 2017 – December 31, 2018

Description

The percentage of members ages 18 and older who were treated with an antidepressant medication, had a diagnosis of major depression and remained on the medication for 90 days (acute phase) and 180 days (continuous phase).

This measure is consistent with the HEDIS 2019 Antidepressant Medication Management measurement specifications.

Methodology — Administrative

This measure includes all members ages 18 and older as of April 30, 2018, from all products with a pharmacy benefit who were continuously enrolled for 105 days prior to the prescription start date through 231 days after. Population identification is based on claim and membership databases. Rates are calculated using administrative data only. Members are attributed to the provider group of the practitioner, regardless of specialty, who diagnosed the new episode of depression.

Results

Total eligible members	10,538
Members remaining on medication for 90 days	7,694
Antidepressant Medication Management Rate - Acute Phase	73.0%
Members remaining on medication for 180 days	5,960
Antidepressant Medication Management Rate - Continuation Phase	56.6%

Antidepressant Medication Management

5/1/2017 - 12/31/2018

INITIATION AND ENGAGEMENT OF ALCOHOL AND OTHER DRUG DEPENDENCE TREATMENT

January 1, 2018 – December 31, 2018

Description

The percentage of members ages 13 and older who were diagnosed with a new episode of alcohol or other drug (AOD) dependence who initiated treatment through an inpatient AOD admission, outpatient visit, intensive outpatient encounter or partial hospitalization within 14 days of diagnosis (initiation) and had two or more additional services with an alcohol or other drug dependence diagnosis within 30 days of the initiation visit (engagement).

Methodology — Administrative

This measure is consistent with the HEDIS 2019 Initiation and Engagement of Alcohol and Other Drug Dependence Treatment measurement specifications and includes all members ages 13 and older as of December 31, 2018, from all products who were continuously enrolled for 60 days prior to the new AOD diagnosis through 44 days after. Population identification is based on claim and membership databases. Rates are calculated using administrative data only. Members are attributed to the provider group or hospital of the practitioner who diagnosed the new episode of AOD dependence.

Results

Members Attributed to Provider Groups

Total eligible members	4,459
Members initiating treatment within 14 days of diagnosis	848
Members engaged in treatment within 30 days of initiation visit	321

Initiation of AOD Treatment Rate **19.0%**

Engagement of AOD Treatment Rate **7.2%**

Members Attributed to Chemical Dependency Programs

Total eligible members	652
Members initiating treatment within 14 days of diagnosis	251
Members engaged in treatment within 30 days of initiation visit	207

Initiation of AOD Treatment Rate **38.5%**

Engagement of AOD Treatment Rate **31.7%**

Members Attributed to Hospitals

Total eligible members	3,944
Members initiating treatment within 14 days of diagnosis	2,054
Members engaged in treatment within 30 days of initiation visit	636

Initiation of AOD Treatment Rate **52.1%**

Engagement of AOD Treatment Rate **16.1%**

**Initiation and Engagement of Alcohol and Other Drug Dependence Treatment
Primary Care and Behavioral Health Provider Groups
1/1/2018 - 12/31/2018**

Initiation - treatment initiated within 14 days of diagnosis

Engagement - Initiation plus two additional follow-up visits within 30 days

BH – Behavioral Health Provider Group

NBH – Non-Behavioral Health Provider Group

**Initiation and Engagement of Alcohol and Other Drug Dependence Treatment
Chemical Dependency Programs
1/1/2018 - 12/31/2018**

Initiation - treatment initiated within 14 days of diagnosis
 Engagement - Initiation plus two additional follow-up visits within 30 days

**Initiation and Engagement of Alcohol and Other Drug Dependence Treatment
Hospitals**
1/1/2018 - 12/31/2018

Initiation - treatment initiated within 14 days of diagnosis
 Engagement - Initiation plus two additional follow-up visits within 30 days

FOLLOW-UP AFTER HOSPITALIZATION FOR MENTAL ILLNESS

January 1, 2018 – December 31, 2018

Description

The percentage of members ages six and older who were hospitalized for treatment of selected mental health disorders in 2018, who were seen on an outpatient basis or were in intermediate treatment with a mental health provider within seven days of discharge.

Methodology — Administrative

This measure is consistent with the HEDIS 2019 Follow-Up after Hospitalization for Mental Illness measurement specifications and includes all members ages six years and older as of discharge date from all products who were continuously enrolled for 30 days after hospital discharge date. Population identification is based on claim and membership databases. Rates are calculated using administrative data only. Members are attributed to the hospital from which they were discharged.

Results

Total eligible members	3,266
Members with follow-up visit(s)	1,586
Follow-Up Visit Rate	48.6%

Follow-up after Hospitalization for Mental Illness
1/1/2018 - 12/31/2018

OPTIMAL HEALTH MANAGEMENT FOR SEVERE MENTAL ILLNESS

January 1, 2018 – December 31, 2018

Description

The percentage of members ages 18 to 65 by December 31, 2018, who have a diagnosis of schizophrenia or bipolar disorder and had at least one fill of an antipsychotic or mood stabilizer medication and have documentation of optimal care.

Methodology — Hybrid

This measure includes members from all products who were continuously enrolled from January 1, 2018 to December 31, 2018, who had a clinic visit in 2018 and were prescribed an antipsychotic or mood stabilizer in 2018. Population identification is based on claim and membership databases. This measure includes a random sample of 66 members (60 + 10% oversample) per medical group. Members are attributed to the provider group with the most office visits during the measurement year. If no office visit, members are attributed to the provider group of the practitioner who prescribed the antipsychotic or mood stabilizer medication.

Results*

Total eligible members	1,957
Members sampled	973
Members optimally managed	399
Members Optimally Managed	44.7% (± 3.8)

Behavioral health provider groups

Total eligible members	994
Members sampled	563
Members optimally managed	195
Members Optimally Managed	36.3% (± 4.9)

Non-behavioral health provider groups

Total eligible members	963
Members sampled	410
Members optimally managed	204
Members Optimally Managed	53.5% (± 6.0)

Completion Rate by Individual Component	Behavioral Health	Non-Behavioral Health	Total
Alcohol Assessment (<i>in 2018</i>)	76.6% (± 4.1)	90.4% (± 3.1)	83.4% (± 2.6)
Blood Pressure (<i>in 2018</i>)	84.6% (± 3.7)	99.1% (± 0.8)	91.8% (± 1.9)
BMI Assessment (<i>in 2018</i>)	83.2% (± 3.8)	97.8% (± 1.7)	90.4% (± 2.1)
Fasting Glucose or HbA1c [if diabetes] (<i>in 2018</i>)	55.5% (± 4.9)	71.0% (± 5.5)	63.1% (± 3.7)
LDL Screening (<i>in 2018</i>)	48.5% (± 5.0)	61.3% (± 5.9)	54.8% (± 3.9)
Tobacco Assessment (<i>in 2018</i>)	92.8% (± 2.6)	99.2% (± 0.7)	96.0% (± 1.4)

* All rates are weighted by the eligible population of the provider groups displayed.

Optimal Health Management for Severe Mental Illness
1/1/2018 - 12/31/2018

— Confidence Interval
Finite population correction factor applied

BH – Behavioral Health Provider Group
NBH – Non-Behavioral Health Provider Group

DIABETIC EYE EXAM

January 1, 2018 – December 31, 2018

Description

The rate represents the percentage of members with diabetes (Type 1 and Type 2) who had a retinal eye exam performed in the measurement year.

Methodology — Administrative

This measure is consistent with the HEDIS 2019 Comprehensive Diabetes Care measurement specifications and includes members ages 18 to 75 years as of December 31, 2018, from all products who were continuously enrolled from January 1, 2018 to December 31, 2018, and who had during the measurement year or year prior:

- two or more encounters in an ambulatory, non-acute inpatient or emergency room setting, or
- one or more encounters in an acute inpatient setting with a diagnosis of diabetes, or
- who were dispensed insulin or oral hypoglycemic prescriptions.

Population identification is based on pharmacy, claim and membership databases. Members are attributed to the provider group with the most office visits for diabetic care in the measurement year.

Note: the health plan HEDIS rate reflects a sample population and includes chart review while this is an administrative measure that includes total eligible members.

Results

Total eligible members	40,326
Members with eye exam	25,240
Diabetic Eye Exam Rate	62.6%

BODY MASS INDEX (BMI)

January 1, 2018 – December 31, 2018

Description

The rate represents the percent of enrolled members with a documented BMI value in the medical record (BMI Assessment) in the measurement year.

Methodology — Hybrid

Elements of this measure are consistent with the HEDIS 2019 Adult BMI assessment specifications. This measure includes members from all products and all ages three and older who were continuously enrolled from January 1, 2018 to December 31, 2018, who had a clinic visit in 2018. Population identification is based on claim and membership databases. The sample includes members from the adult and child and adolescent preventive services measures.

BMI Assessment - Adult: the percentage of members ages 19 and older within the sample with a documented BMI value in the medical record.

BMI Percentile Rate - Child and Adolescent: the percentage of members ages three to 18 within the sample with a BMI percentile or BMI plotted in the medical record, or for members \geq age 16 with a documented BMI in the medical record.

Results*

BMI Assessment - Adult

Total eligible memberst	407,250
Members sampled	6,194
Members with documented BMI	5,594
BMI Assessment Rate - Adult	94.3% (\pm 1.4)

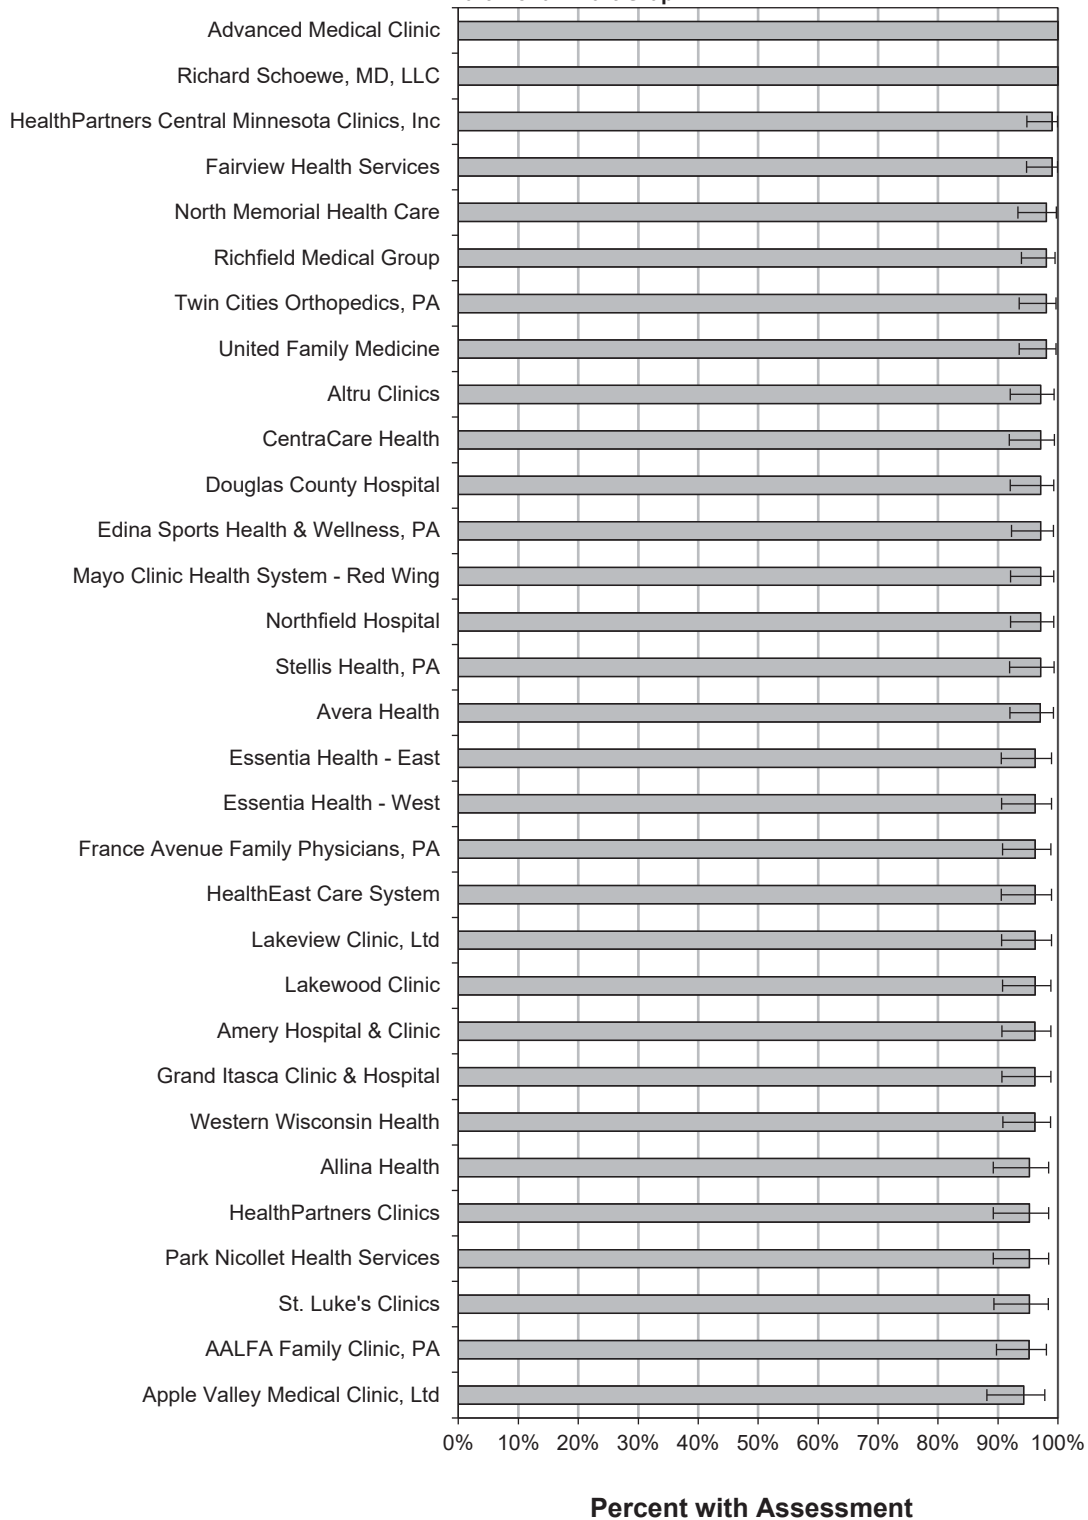

BMI Percentile - Child and Adolescent

Total eligible members	142,560
Members sampled	5,652
Members with BMI percentile or BMI plotted	4,566
BMI Percentile Rate - Child and Adolescent	88.2% (\pm 1.8)

* All rates are weighted by the eligible population of the provider groups displayed.

Percent with Assessment

ALCOHOL ASSESSMENT — ADULT PRIMARY CARE

January 1, 2018 – December 31, 2018

Description

The rate represents the percentage of members ages 19 and older by December 31, 2018, whose alcohol use status is documented in the medical record in the measurement year. Documentation of alcohol assessment must be dated and include the amount and frequency of alcohol use.

Methodology — Chart Review

This measure includes members from all products who were continuously enrolled from January 1, 2018 to December 31, 2018, who had a clinic visit in 2018. Population identification is based on claim and membership databases. The sample includes members from the adult preventive services measure.

Results*

Total eligible members	401,562
Members sampled	6,083
Members with assessment	3,563
Alcohol Assessment Rate	65.5% (± 2.9)

* All rates are weighted by the eligible population of the provider groups displayed.

ALCOHOL ASSESSMENT — ADULT OB/GYN

January 1, 2018 – December 31, 2018

Description

The rate represents the percentage of women ages 19 and older by December 31, 2018, whose alcohol use status is documented in the medical record in the measurement year. Documentation of alcohol assessment must be dated and include the amount and frequency of alcohol use.

Methodology — Chart Review

This measure includes women from all products who were continuously enrolled from January 1, 2018 to December 31, 2018, who had a clinic visit in 2018. Population identification is based on claim and membership databases. The sample includes members from the OB/GYN preventive services measure.

Results*

Total eligible members	72,078
Members sampled	1,983
Members with assessment	1,349
Alcohol Assessment Rate	75.0% (± 3.2)

* All rates are weighted by the eligible population of the provider groups displayed.

GENERIC DRUG USE — PRIMARY CARE

January 1, 2019 – June 30, 2019

Description

The rate represents the percentage of all prescriptions filled with generic drugs for HealthPartners members with a drug benefit.

Methodology — Administrative

This measure includes all prescriptions for members with a drug benefit filled between January 1, 2019 and June 30, 2019, whose prescription was filled with a generic drug. This rate is calculated with pharmacy claims data. Members are attributed to the primary provider group of the prescribing physician.

Results*

Total prescriptions	3,674,286
Generic drug prescriptions	3,449,534
Generic Drug Use Rate	93.9%

* Results include all prescriptions regardless of prescribing physician specialty. Results from medical groups who are current or anticipated HealthPartners Partners in Excellence (PIE) participants are graphically displayed.

GENERIC DRUG USE — SPECIALTY CARE

January 1, 2019 – June 30, 2019

Description

The rate represents the percentage of all prescriptions filled with generic drugs for HealthPartners members with a drug benefit.

Methodology — Administrative

This measure includes all prescriptions for members with a drug benefit filled between January 1, 2019 and June 30, 2019, whose prescription was filled with a generic drug. This rate is calculated with pharmacy claims data. Members are attributed to the specialty provider group of the prescribing physician.

Results*

Behavioral Health

Total prescriptions	132,451
Generic drug prescriptions	131,417
Behavioral Health Generic Drug Use Rate	99.2%

Cardiology

Total prescriptions	152,112
Generic drug prescriptions	139,895

ANNUAL MONITORING FOR PATIENTS ON PERSISTENT MEDICATIONS PRIMARY CARE

January 1, 2018 – December 31, 2018

Description

The percentage of members ages 18 and older who received at least a 180-day supply of ambulatory medication therapy for Angiotensin Converting Enzyme (ACE) inhibitors, Angiotensin Receptor Blockers (ARB) and/or diuretics during the measurement year and had at least one therapeutic monitoring event for the therapeutic agent in the measurement year.

A therapeutic monitoring event is defined as:

- At least one serum potassium (K+) and a serum creatinine (SCr) for prescribed ACE inhibitors, ARBs and/or diuretics.

Methodology — Administrative

This measure is consistent with the HEDIS 2019 Annual Monitoring for Patients on Persistent Medications measurement specifications and includes all members ages 18 years and older as of December 31, 2018, from all products except Medicare Cost with a drug benefit who were continuously enrolled from January 1, 2018 to December 31, 2018. Population identification is based on claim and membership databases. Rates are calculated using administrative data only. Members are attributed to the medical group of the prescribing provider's primary location of the most recent script that qualified the member for the denominator. Only scripts written by a provider with a primary care specialty are included; however, therapeutic monitoring claims from all providers are included.

Results

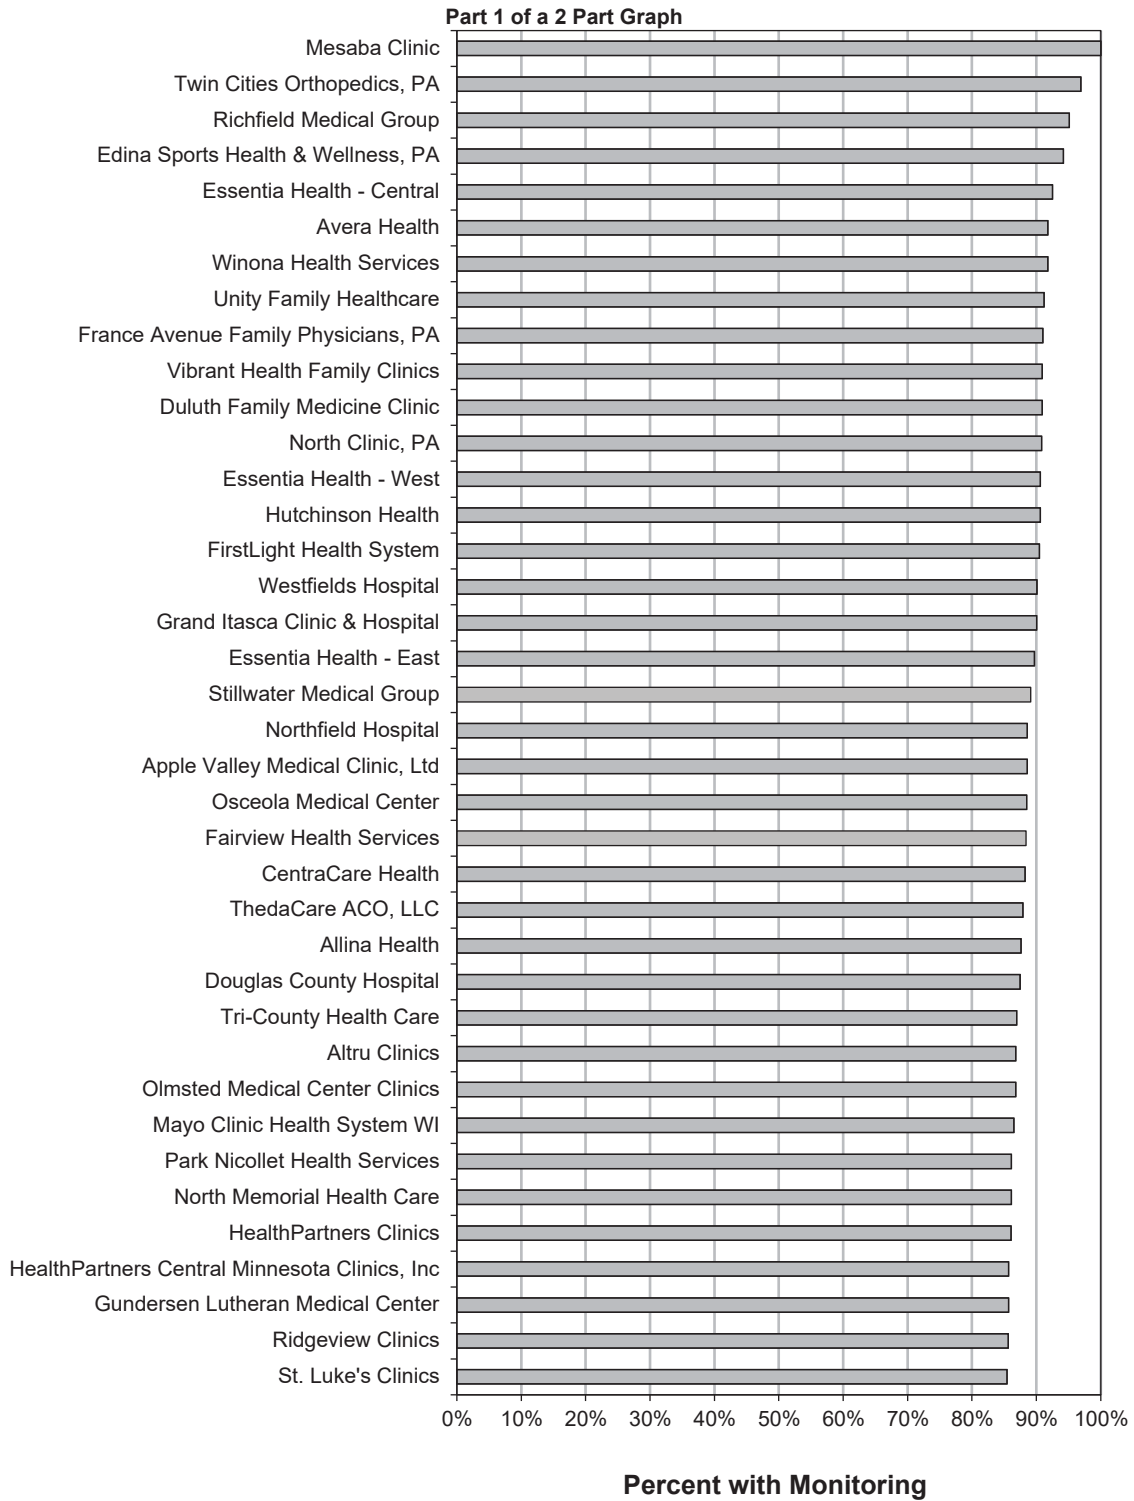

ACE/ARB monitoring

Total eligible members	39,827
Members with monitoring event	33,977
Annual Monitoring Rate	85.3%

Diuretics monitoring

Total eligible members	27,395
Members with monitoring event	23,022
Annual Monitoring Rate	84.0%

- At least one serum potassium (K+) and a serum creatinine (SCr) for prescribed ACE inhibitors, ARBs and/or diuretics.

Methodology — Administrative

This measure is consistent with the HEDIS 2019 Annual Monitoring for Patients on Persistent Medications measurement specifications and includes all members ages 18 years and older as of December 31, 2018, from all products except Medicare Cost with a drug benefit who were continuously enrolled from January 1, 2018 to December 31, 2018. Population identification is based on claim and membership databases. Rates are calculated using administrative data only. Members are attributed to the medical group of the prescribing provider's primary location of the most recent script that qualified the member for the denominator. Only scripts written by a provider with a cardiology specialty are included; however, therapeutic monitoring claims from all providers are included.

Results

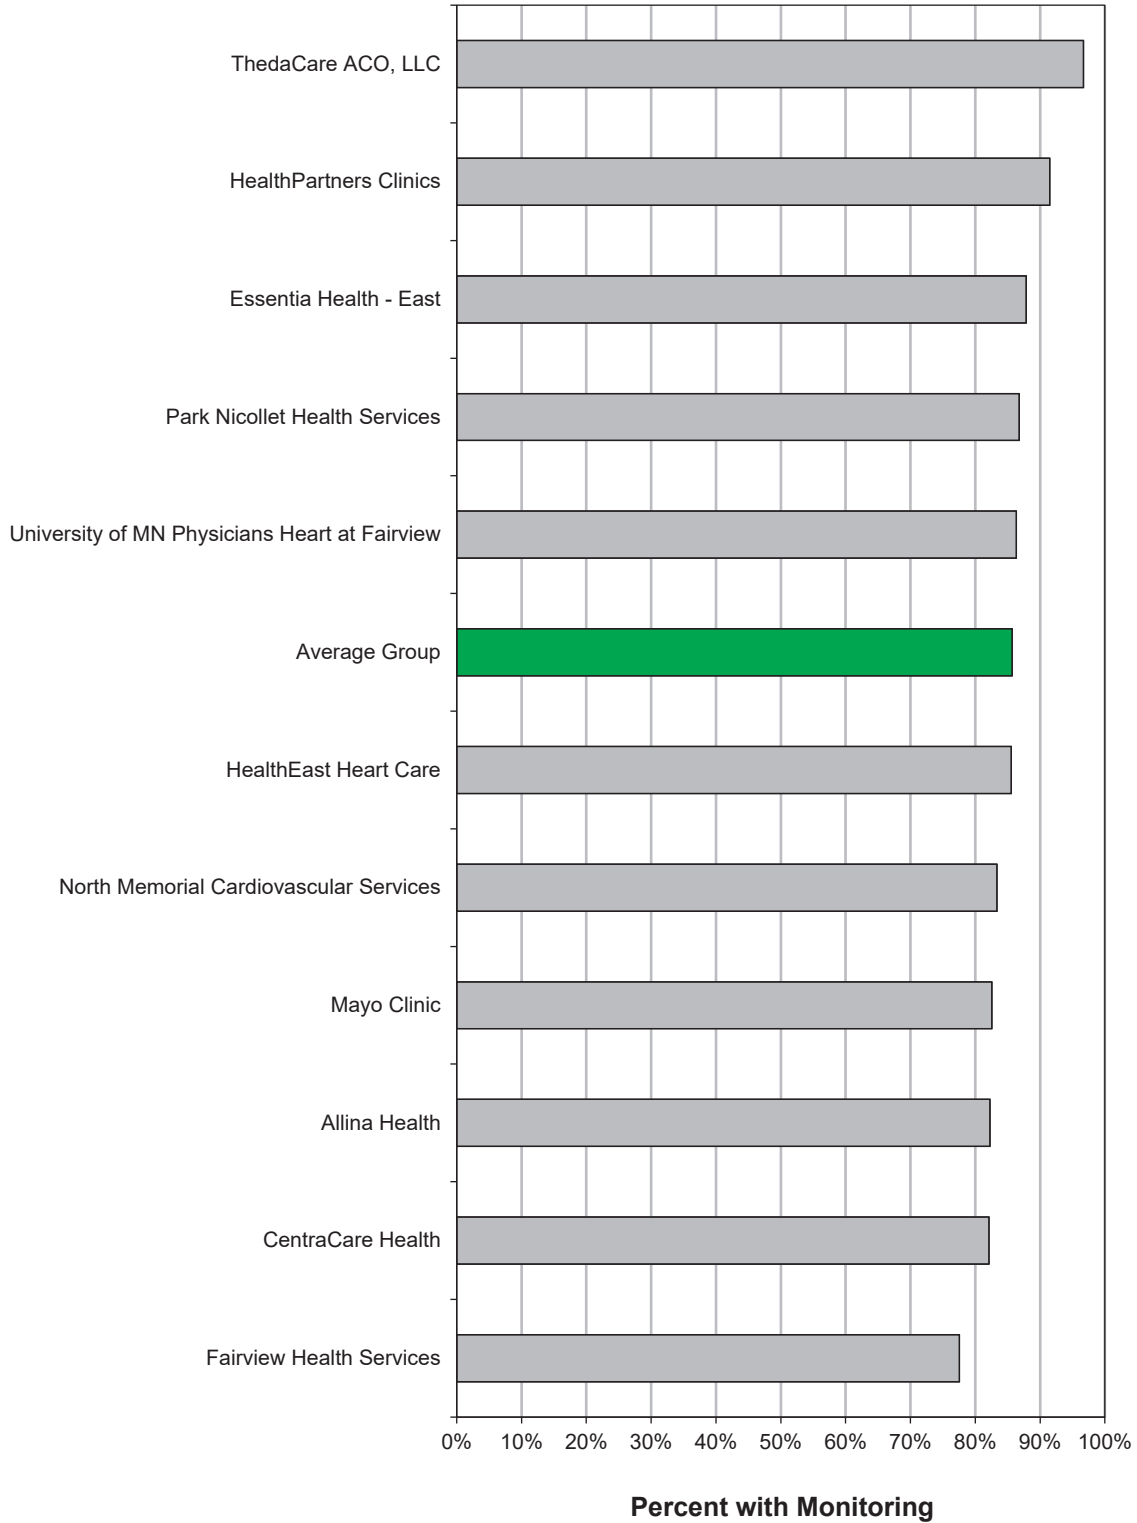

ACE/ARB monitoring

Total eligible members	2,537
Members with monitoring event	2,161
Annual Monitoring Rate	85.2%

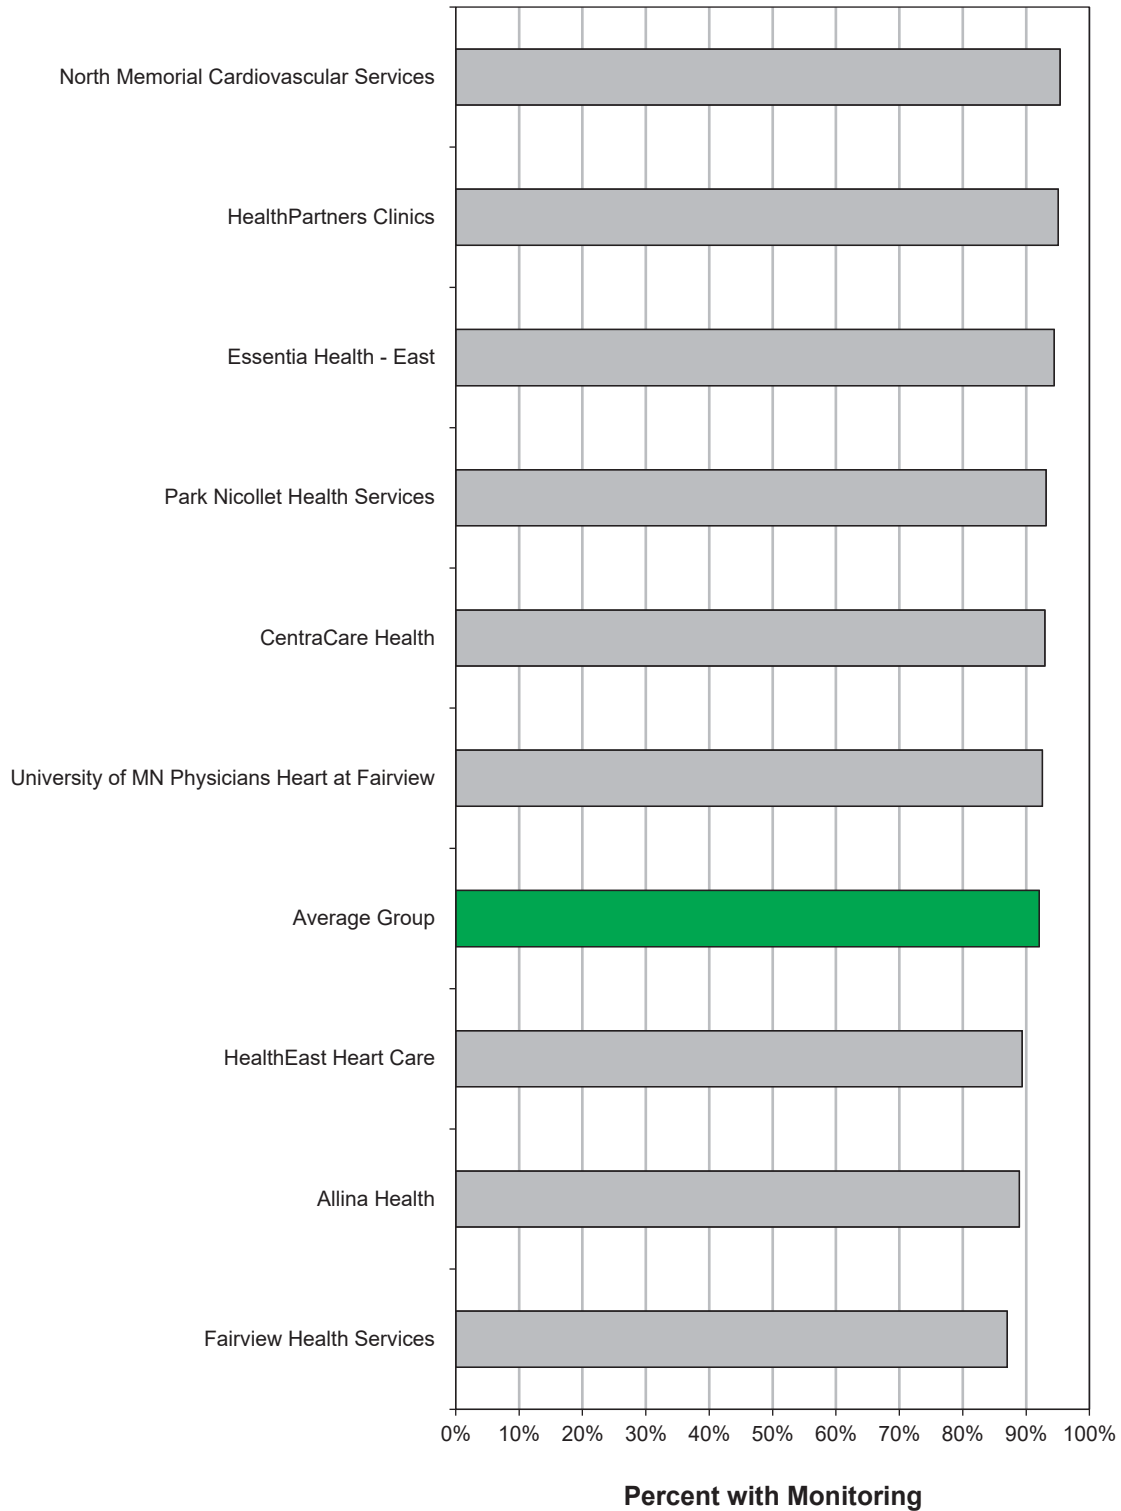

Diuretics monitoring

Total eligible members	1,268

MEDICATION ADHERENCE FOR ASTHMA – PHARMACY

January 1, 2018 – December 31, 2018

Description

The percentage of members with a diagnosis of asthma who remain on a controller medication¹ and meet a 75% portion of days covered (PDC) for the controller medication as measured by the days' supply filled divided by the number of days from the date of the first fill to the end of the measurement period.

Methodology — Administrative

This measure includes members age 5–64 years with a diagnosis of asthma from commercial products who were continuously enrolled from January 1, 2018 to December 31, 2018.

The eligible population for members with a diagnosis of asthma is defined as having had, within the previous 24 months:

- one or more inpatient or emergency department encounters with a discharge diagnosis of asthma, or
- two or more outpatient encounters with a diagnosis of asthma on different dates of service and two or more distinct claim dates for inhaled/oral anti-inflammatory or inhaled/oral bronchodilator medications, or
- three or more distinct claim dates for inhaled bronchodilator or anti-inflammatory medications and no diagnosis of COPD.

Rates are calculated administratively using outpatient claims. Members are attributed to the pharmacy where they have the greatest amount of days' supply filled during the measurement period.

Results

Commercial Members

Total treated members	8,430
Members with 75% portion of days covered	4,621
Medication Adherence Rate	54.8%

¹ *Antiasthmatic combinations, antibody inhibitor, inhaled corticosteroids, Leukotriene modifiers, mast cell stabilizers, bronchodilators, systemic corticosteroids*

**Medication Adherence for Asthma
Pharmacy
1/1/2018 - 12/31/2018**

MEDICATION ADHERENCE FOR DIABETES – PHARMACY

January 1, 2018 – December 31, 2018

Description

The percentage of members with a diagnosis of diabetes who remain on oral hypoglycemic medication¹ and meet an 80 percent portion of days covered (PDC) for the medication as measured by the days' supply filled divided by the number of days from the date of the first fill to the end of the measurement period.

Methodology — Administrative

This measure includes members age 18 and older from commercial products and who were continuously enrolled from January 1, 2018 to December 31, 2018.

The eligible population for members with a diagnosis of diabetes is defined as having had, within the previous 15 months:

- one or more prescription fills of insulin or oral hypoglycemic/antihyperglycemic agents, or
- two or more outpatient or non-acute inpatient encounters with a diagnosis of diabetes on different dates of service, or
- one or more acute inpatient or ED encounters with a diagnosis of diabetes.

Rates are calculated administratively using outpatient pharmacy claims. Members are attributed to the pharmacy where they have the greatest amount of days' supply filled during the measurement period.

Results

Commercial Members

Total treated members	20,436
Members with 80% portion of days covered	16,808
Medication Adherence Rate	82.2%

¹ Oral Hypoglycemic drugs are defined using GPI code 27 and route of admin of Oral

Pharmacy
1/1/2018 - 12/31/2018**

CHOLESTEROL PERSISTENCE — PHARMACY

January 1, 2018 – December 31, 2018

Description

The percentage of members of any age who started cholesterol medications and remained on those medications for 180 days from January 1, 2018 to December 31, 2018.

Methodology — Administrative

This measure includes members from all products with a new prescription for a statin medication in the measurement period of January 1, 2018 to December 31, 2018. Members must be continuously enrolled for the period of 180 days prior to the new prescription start through 216 days following the new prescription state. Population is identified using membership databases. Rates are calculated administratively using outpatient pharmacy claims. Members are attributed to the pharmacy where the antidepressant medication was filled.

Results

Total eligible members	18,793
Members with new statin prescription	10,558
Cholesterol Persistence Rate	56.2%

**Cholesterol Persistence
Pharmacy
1/1/2018 - 12/31/2018**

ANTIDEPRESSANT MEDICATION MANAGEMENT – PHARMACY

May 1, 2017 – December 31, 2018

Description

The percentage of members ages 18 and older who were treated with an antidepressant medication, had a diagnosis of major depression and remained on the medication for 180 days (continuous phase).

This measure is consistent with the HEDIS 2019 Antidepressant Medication Management measurement specifications.

Methodology — Administrative

This measure includes all members ages 18 and older as of April 30, 2018, from all products with a pharmacy benefit who were continuously enrolled for 105 days prior to the prescription start date through 231 days after. Population identification is based on claim and membership databases. Rates are calculated using administrative data only. Members are attributed to the pharmacy where the antidepressant medication was filled.

Results

Total eligible members	10,538
Members remaining on medication for 180 days (continuation phase)	5,960

OPTIMAL CARE FOR ACUTE LOW BACK PAIN

January 1, 2018 – December 31, 2018

Description

The rate represents the percentage of members ages 18 and older with newly diagnosed acute low back pain who received optimal care for acute low back pain.

Optimal care for acute low back pain is defined as an initial office visit for low back pain and does NOT include any of the following services in the first six weeks of care:

- Imaging
- Injection therapy referral
- Narcotic prescription
- Surgical consultation

Methodology — Administrative

This measure includes members ages 18 years and older as of December 31, 2018, from commercial and Medicaid products with a pharmacy benefit. A newly diagnosed episode of acute low back pain for a member is defined as having no non-pharmacy low back pain claims at any facility in the 180 days prior to the diagnosis visit. Members with cancer, trauma, neurological impairment, IV drug abuse or pregnancy diagnoses prior to the end of the first six weeks following diagnosis are excluded. Population identification is based on claim and membership databases. Rates are calculated using administrative data only. Members are attributed to the provider group of the diagnosing practitioner.

Results

Total eligible members	13,276
Members with appropriate care	10,021
Members Optimally Managed	75.5%

Rate by Service

No imaging in first six weeks	92.0%
No injection in first six weeks	98.2%
No narcotic prescription in first six weeks	83.4%
No surgical consultation in first six weeks	98.8%

PREVENTIVE SERVICES — ADULT PRIMARY CARE

January 1, 2018 – December 31, 2018

Description

The rate represents the percent of enrolled members ages 19 and older by December 31, 2018, who are up-to-date (UTD) for all appropriate preventive services and the percent up-to-date rate by each service type. The measure includes preventive screening appropriate to each member's age and gender. (The Adult Preventive Services matrix of required services by age and gender is included in the 2019 Clinical Indicators Report Technical Supplement at healthpartners.com/quality.)

Methodology — Hybrid

Elements of this measure are consistent with HEDIS 2019 measures. This measure includes members from all products who were continuously enrolled from January 1, 2018 to December 31, 2018, who had a clinic visit in 2018. Population identification is based on claim and membership databases. This measure includes a random sample of 105 members (100 + 5% oversample) per medical group. The UTD rate reflects a combination of administrative and chart abstracted data. Members are attributed to the primary care provider group with the most office visits during the measurement year. In addition to the members UTD rate, also displayed is an UTD rate that includes a tobacco assessment component. The Institute for Clinical Systems Improvement (ICSI) preventive services guideline for adults lists tobacco assessment as a Level I Component.

Results*

Total eligible members	407,250
Members sampled	6,195
Members up-to-date (<i>Combination 6</i>)	4,127
Members Up-to-Date - Primary Care (<i>Combination 6</i>)	74.4% (± 2.6)

CHILD & TEEN CHECK-UPS

July 1, 2017 – June 30, 2019

Description

The rate represents the percentage of children ages six months to 20 years as of June 30, 2019, enrolled in Prepaid Medical Assistance Program (PMAP) or MinnesotaCare (MNCare) who had a preventive care visit within Child & Teen Check-Ups (C&TC) defined time periods:

- Last six months if age is six months through 17 months
- Last one year if age is 18 months through six years
- Last two years if age is seven years through 20 years

Methodology — Administrative

This measure includes all children ages six months to 20 years old from PMAP or MNCare products who were enrolled on June 30, 2019. Population identification is based on encounter, claim and membership databases. Rates are calculated using administrative data only. Members are attributed to the primary care provider group with the most office visits during the measurement year.

Results

Total eligible members	71,943
Preventive visits	46,072

CLINIC SAFETY ASSESSMENT SURVEY 2019

Description

This measure displays current provider group efforts related to six ambulatory patient safety topics.

Methodology — Provider Group Survey

Primary care and specialty providers are surveyed on an annual basis. Results are self-reported. The six topics and related survey questions are:

1. Has your provider group developed and completed a Safety Culture Assessment Survey?

- No assessment Assessment completed; includes reporting system of incidents and near misses Assessment and implementation of action plan(s) based on analysis of reported incidents

2. Has your provider group established a protocol for dispensing sample medications?

- No protocol If samples are provided to patients, there is a protocol established and implemented at all clinic sites. Sampling eliminated at all clinic sites

3. Has your provider group established a protocol for members on chronic anticoagulation therapy?

- No protocol Protocol established and implemented at all clinic sites 100% of all patients on chronic anticoagulation therapy are managed by protocol; protocol compliance monitored and documented

NA = We do not manage patients on anticoagulation therapy.

4. Has your provider group established a protocol for safe use of abbreviations?

- No protocol Protocol established or EMR support implemented at all clinic sites Compliance monitored and documented

5. Has your provider group established a protocol for medication refills?

- No protocol Protocol established and implemented at all clinic sites Compliance monitored and documented

6. Has your provider group established a protocol for use of controlled substances?

- No protocol Protocol established and implemented at all clinic sites Compliance monitored and documented

PATIENT EXPERIENCE — MEDICATION SAFETY — SPECIALTY CARE

2019 Member Survey

Description

On an annual basis, members with medications prescribed by specialty care physicians are asked if they are satisfied with the explanation provided by their clinic concerning the reasons for and side effects of the prescribed medication. The rate represents the percent of surveyed members responding with “very satisfied” on questions related to medication safety.

Methodology — Member Survey

Patient experience was determined through mail surveys conducted by HealthPartners in February and March 2019. Results were distributed to provider groups second quarter, 2019. OB/GYN includes a random sample of members ages 18 years and older. Cardiology, ENT and Orthopaedics include a random sample of members that includes both adults and children. Specialty care results include members enrolled in commercial, Medicare or Medicaid products. The data were weighted to equal sample sizes of 100. The results were also weighted to control for self-reported health status. Results are reported for 12 cardiology, 16 ENT, 20 OB/GYN and 15 orthopaedic groups.

Survey Questions - Specialty Care

1. How satisfied are you with the explanations you received about the reason for the prescribed medicines?
2. How satisfied are you with the information you received about any side effects of the medicines?

Results

Cardiology

Total members responding	906
Total members with prescribed medications	510
Very satisfied - explanation for prescribed medications	61.8%
Very satisfied - information received about side effects	55.7%

ENT

Total members responding	800
Total members with prescribed medications	377
Very satisfied - explanation for prescribed medications	61.9
Very satisfied - information received about side effects	55.4%

OB/GYN

Total members responding	1,187
Total members with prescribed medications	636
Very satisfied - explanation for prescribed medications	69.0%
Very satisfied - information received about side effects	62.7%

Orthopaedics

Total members responding	1,015
Total members with prescribed medications	464
Very satisfied - explanation for prescribed medications	66.7%
Very satisfied - information received about side effects	63.1%

TOTAL COST OF CARE AND RESOURCE USE — PRIMARY CARE

January 1, 2018 – December 31, 2018

Description

Medical groups risk adjusted cost and resource use effectiveness at managing their primary care attributed population. Total cost of care is a measure of efficiency, intensity and price of care delivered compared to the average for similar primary care providers while resource use is a measure of efficiency and intensity, removing the effects of price. The total cost and resource use measures include all services and procedures across all sectors of care (e.g. physician services, lab tests, x-rays, pharmacy, specialists, and hospitals). In 2012, this HealthPartners-developed measure became one of the first measures of resource use and cost to be endorsed by the National Quality Forum.

Methodology

These measures are based on commercial fully insured and self insured members ages 64 and under who are enrolled for a minimum of nine months. These members are attributed to the medical group that provides the majority of primary care office visits as determined by the specialty of the servicing physician. These include family practice, internal medicine, pediatrics, geriatrics and obstetrics and gynecology specialties. All care members receive is assigned a relative resource use value using HealthPartners' patented algorithm, Total Care Relative Resource Values or TCRRVs. These values quantify resource use for all procedures and services across all sectors of the health care system.

Attributed members are assigned Adjusted Clinical Groups (ACG) risk adjustment scores based on all diagnoses, age and gender and are aggregated to the provider group level. ACGs, developed by Johns Hopkins University, represent the illness burden of a population and allow comparisons between populations with varying illness burdens.

Medical costs, pharmacy costs and resources use for each attributed member are totaled with outliers being capped at \$100,000. Each provider group's attributed member costs, resource use and risk scores are aggregated to create risk adjusted per member per month values. Total cost of care and resource use indices are created by dividing each provider's risk adjusted per member per month value by the respective 13 county metro area risk adjusted per member per month value.

Results

HealthPartners 13 county Metro Network Average: 1.000

Total Cost Indices > 1.000 represent providers that are more expensive than average

Total Cost Indices < 1.000 represent providers that are less expensive than average

TOTAL COST INDEX AND RESOURCE USE — SPECIALTY CARE

October 1, 2016 – September 30, 2018

Description

Medical group's case mix and risk adjusted cost and resource use effectiveness at managing their attributed patients' episodes of care.

The total cost index is a measure of the efficiency, intensity and price of care delivered compared to the same specialty average for the same case mix and risk profile of episodes. The resource use index is identical to the total cost index; however it removes the effects of price. Total cost and resource use measures include all care including: hospital, professional, ancillary and pharmacy costs.

Methodology

These measures are based on episodes treatment groups (ETGs) for commercial fully insured and self insured members where episodes are completed, non outliers and the member is continuously enrolled throughout the duration of the episode. ETGs group all care received related to a condition into a defined episode of care. All care members receive is assigned a relative resource use value using HealthPartners' patented algorithm, Total Care Relative Resource Values or TCRRVs. These values quantify resource use for all procedures and services across all sectors of the health care system. Providers are attributed to episodes where they represent at least 25% of management and surgery resources for the episode. The episodes included in the measures are case mix and severity adjusted by specialty and excludes all trauma and transplants. Total cost of care and resource use indices are created for each specialty by dividing each provider's risk actual cost or resource use by the 13 county metro expected values.

Results

HealthPartners 13 county Metro Network Average: 1.000

Total Cost Indices > 1.000 represent providers that are more expensive than average

Total Cost Indices < 1.000 represent providers that are less expensive than average

TOTAL COST INDEX — HOSPITALS AND SURGERY CENTERS

January 1, 2018 – December 31, 2018

Description

Hospitals and surgery centers case mix and place of service mix adjusted cost index. The cost index measures a facility's inpatient and outpatient total costs relative to all other facilities.

Methodology

This measure is based on inpatient and outpatient commercial fully insured and self insured non-outlier inpatient admissions and outpatient visits. Facility case mix is adjusted by DRG for inpatient admissions and APC and RVUs for outpatient visits. The inpatient/outpatient case mix is accounted for by weighting the percent of business in each component by facility. Total cost of care indices are created for each facility by dividing each facility's case and place of service risk actual costs by the 13 county metro expected values.

Results

HealthPartners 13 county Metro Network Average: 1.000
